Overview

ELECTROMOTION ENERGY CORPORATION'S globally-patented Synergistic Energy Heat Pump (SEHP)™ technology replaces your heating, cooling and hot water systems with one complete unit—**The Revolution™**

The Revolution™ provides unprecedented reductions of thermal pollution, energy consumption, GHG and cost savings for both the residential site, electric and gas utilities while also providing backup electricity and heat for when the utility power fails!

A Revolution™ installation is much like an air conditioner but involves natural gas and other differences. When providing heat or hot water to your home The Revolution™ *generates electricity as a 'free' byproduct* to provide surplus electricity to the utility for credit; essentially for heating your home!

Additional Benefits

- ◇ **NEVER** without electricity, heating, cooling or hot water to your home
- ◇ **ELIMINATES** the 'furnace room' which eats up your valuable living space
- ◇ **ELIMINATES** thermal pollution by 300%
- ◇ **ELIMINATES** carbon monoxide poisoning
